Hello,

I am ReKoil and I am a co-op modder. I was unsure whether to post this in the modding section or here. Feel free to move this post if I chose wrong.

I have run into a peculiar problem when modding field, namely that when a client joins with either scripts 3.4 or 4.1 they crash instantaneously and get a standard internal error message. As far as I can tell the problem seems to be a data mis-match between the server version of the map and the client version. The weird thing is however that users with 4.0 patch 1 seem to be unaffected. Myself and two others who use 4.0 patch 1 were able to fully play the map from start to end while everyone else with 4.1 or 3.4 kept crashing.

I have attached a 4.1 client's crashdump and was hoping that someone could please tell me what the dump file is giving as the reason for this crash?

regards,  
Rekoil
