DuntMammy Sound Reduced

To reduce it I simply opened up the wav in wavestudio (from audigy cd) and chose 'Reduce Volume' . It then asks you by how much u wanna reduce it.   You could also use Windows Soundrecorder (sndrec32). Just goto Effects menu and choose decrease volume. It does it @ 25% intervals.

To extract the files from the always.dat use xcc mixer or renex

Thank you for the tip...
