4.2 has a newer version of WWConfig that has fixed resolutions settings in it (I brought it up when my laptop didn't display any correct resolutions in it). However, jonwil didn't upload the file, I would but my laptop's hard drive is currently USB'd to my main computer as a do a full clone and defrag of it.

For example, on my laptop it only listed two resolution spots, 800x600, and a second spot on the slider, if you slid it it displayed some other weird resolution, but then when you reopened wwconfig or restarted the game it was back at 800x600.
