Monitor_Sound
Stop_Sound

Cause currently theres no way to stop a looped sound other than rejoining game and also no way to know if a sound ended other than having a timer and manually entering sound length.

Also not sure if updating the object to clients works as a hacky way to stop the looping sound?
(After you use Stop_Sound)
I usually make a w3d that creates sound and then just destroy it.
That still makes a looped sound continue unless you rejoin the game.

Jonwil couldnt this be a nice next project to do in the ren engine ? Implement ids with sounds?
Only if you forget to check "Stops when hidden"
