Monitor\_Sound  
Stop\_Sound

Cause currently theres no way to stop a looped sound other than rejoining game and also no way to know if a sound ended other than having a timer and manually entering sound length.

Also not sure if updating the object to clients works as a hacky way to stop the looping sound?  
(After you use Stop\_Sound)  
I usually make a w3d that creates sound and then just destroy it.  
That still makes a looped sound continue unless you rejoin the game.

Jonwil couldnt this be a nice next project to do in the ren engine ? Implement ids with sounds?  
Only if you forget to check "Stops when hidden"
