---

I found a glitch to scope in any weapon.

first

- 1) get sniper
- 2) scope mode and zoom in, you must zoom in
- 3) quickly press any other weapon key A SPLIT SECOND before the right click button (the one you use to enter/exit scope)
- 4) done, to get out press any other weapon key or die

I tried taking screen shot but my screen shots are not saving for some reason.
