Do NOT mix 4.x and BIACH, they aren't compatible. The TT team has access to the BIATCH source code and ported all of the things in BIATCH that are possible to put into 5.x in there (the things that are missing just aren't possible to easily support in 4.x due to how it all works)

That said, if there is a feature in BIATCH that isn't in 4.x and that you really want, post in here and maybe the team can find a way to do it.
