The easiest way to find out if a script is on a preset is to open the objects.ddb in a hexeditor and search for the script name.

Ok, I'll try that. On a side note, I'm getting an error: mss32.dll was not found when trying to start W3dview.exe. Yeah I know how to check if its already on the preset, but I mean if its attached in the level. You know, you can add more scripts to a preset in a level when its that preset is created.

Do the same hexedit trick but on the .ldd file for that level.
