Subject: RenRem is enabled when AllowRemoteAdmin=false in server.ini

Issue is that if AllowRemoteAdmin=false, the code skips reading the RemoteAdminPort and uses the hardcoded default of 63999.

Only if RemoteAdminPort=0 will RenRem be disabled. But because the FDS will never read RemoteAdminPort when AllowRemoteAdmin=false it will use the hard-coded value of 639999.

To disable RenRem currently you need to set AllowRemoteAdmin=true with RemoteAdminPort=0.

Tested with a socket browser.
