Hello!

Stoked to try to play again. I ended up purchasing Renegade via Steam and have had nothing but issues.

I installed it and tried loading it and it ran through the opening credits/video but as soon as that stopped it just exits out to my home screen with a window that pops up saying

"Compatibility settings have been applied"
Renegade.exe
Westwood Studios

To fix a Compatibility problem, Compatibility settings were applied to the program. These settings will be used the next time you run the program.

Two boxes show up underneath, 1st being "run using Compatibility settings" and 2nd is "cancel"

So I click on the 1st option and nothing happens.

I ended up in this thread and downloaded the TT patch (I think? I downloaded the latest release....version 4.8 update 3) and it is still doing the same thing...running through the opening credits/movie and then going back to the Compatibility issue....

What should I do?

I just bought this laptop, a Dell Inspiron 16 5640

Edit to add: i installed red alert 2 amd it works fine
