Slicer_238Hey Sir Phoenix, I have a question. I took a screenshot of my Renegade score at 1337. I cut it out and now for the picture it is just a small box in a big white void. How do I make it a tiny box and have no white surrounding it like your post count one?

Crop the image. This just makes the area that you choose the entire image. Just select the small box with the crop tool in whatever program you're using and viola.

(In photoshop it's the two right angles that cross each other, in the top of the tool bar.)
