TaximesBlazer...we can barely even break orbit of our planet with a projectile using thousands of pounds of chemical propellant.

As far as that goes, it appears to me that we're going about it the wrong way...

But hey, I'm not claiming to know a better way to travel in space, I'm just saying that if a few minds greater than mine sat down and thought about it for awhile, they would come up with something eventually. And I'm sure they will...eventually.

Yep...I don't see it happening though unless we can figure out a way to defeat that beast known as gravity
