Scripts.dll version 1.2 (www.sourceforge.net/rentools/) should go into a "scripts" folder under your mod folder. A copy of the Westwood studios scripts from the renegade directory (C:\Westwood\Renegde) should be renamed to scripts2.dll and placed in the same folder as the one from Sourceforge.

Please note that if you use the script.dll version 1.2 in a mod you must include credits for the authors of the scripts.dll (Jonathan Wilson, Thomas Anderson (Dante) and NameHunter).
