1) Windows 2000 Is not a good choice for Gaming. I tried to host and play on a 4 player server a while ago on W2K DC with a pc with similar specs, and the max I got was 2FPS.

2) The FPS you are getting now is fairly normal. 10-25FPS is the average for a PC like that.

Most of my PC are like yours.

P3 866

384MB ram

100GB storage (2HDs)

WinXP

DSL about same speed.

But my graphics card is a geforceFX 5200 128MB.

That improved performance ALOT trust me lol.

But if you plan to upgrade to WinXP, prepare to buy a new gfx card. XP doesn't support it.

So in short terms:

What is happening to you right now is normal.....sucks but is normal.
