majikentBlazerDamn Sun servers. We have a Sun Enterprise-4000 at work that has 8 250Mhz CPUS in it. I looked into upgrading it and to upgrade it to 400Mhz processors costs like \$1350.00 per processor...OUCH.

Expensive... but reliable as all hell too... the company that my father works at has a Sun server that pretty much runs everything. They once had it up and running and didn't require a reboot for 370+ days and the only reason they had to reboot it was because they were upgrading it. I wish my W2k machine would do that!

Heh yeah there was a DNS server at Qwest that had a 3 year uptime. We had a funeral for it when we decommissioned it
