Just make sure to block out beacons/c4s in the same way as big-heads.
Or any w3d for that matter.
But you are probably already blocking them all out.

Quote:
I play alot on the CEO sniper server (and the public one too), and I've never encountered any of their members cheating.

It was only 1 member, and it was to do with disarming beacons, so that wouldn't really be an issue on sniper servers.

Ask around for the proof if you want. There were 2 videos, and a screenshot all a setup.
