rm5248you can have up to 8 hard drives. also, 2 intel xeon processers. up to 4 media bay hard drives. also available with a battery backup. and thats for the most expensive one. the cheaper ones are probably also fairly good, i think

BTW you can also install your own operating system on it. they can install it with linux or windows.

Up to 8 hard drives?!?!?! So? This sun server supports the Netra S1 Thin Storage (Boot Device); 250+ terabytes direct connect storage available; Fibre Channel, Low Voltage Differential and Differential SCSI supported; Sun StorEdge A5200; Sun StorEdge array products supported, Sun StorEdge 9900 products will be supported. I highly doubt that this would match any of the numbers of the Sun server listed above. 2 Intel xeon processors? Wow... I still can't bring myself to being impressed, especially after seeing that the server shown here is capable of holding up to 106 UltraSPARC III Cu 1.2-GHz processors and more than 1/2 TB Memory in a single domain... now this is impressive.
