I know price doesn't matter to you, but seriously, the 9800 pro 128mb card costs \$200+ less (XT = \$500, 9800 PRO 128 = \$300 or less, shop around) and its performance is almost identical to the XT's in most situations. The only noticeable difference would be in the most demanding games on the highest AA and graphics settings, and benchmarks show only an increase of about 5 FPS.

I'd recommend a 9800 PRO 128 over a 9800XT anyday simply because of the extreme difference and cost and huge similarity in performance.

You could just slightly overclock the 9800 PRO 128 to make up in the performance difference from the XT, at NO EXTRA COST!
