ACK you could do what the Counterstrike mappers do and put a tattoo on the map. Either behind a wall or somewhere in the map like on the peak of a mountain. Just a little like AircraftKiller insignia and the year it was made. I think that'd look kinda coolio personally. Then people'd see it too, more than see a readme. Plus if people don't beleive you in game you can be like "look up... MWAHAHHA"
