the fds isnt on my computer but it none of the fds commands work on his either.  But it simply
doesnt work... u type "msg hi", it goes to a "different page" )makes the clicking nose like when u
go to a new url in i-explorer but simply does NOTHING else..nothing works...
not ban name reason
    kick   ^   ^
    allow ^
    msg message
   amsg message
   player_info
but the server is up and everything and u still get game info on it AND on the irc...but no
commands work in the console on my computer OR the actual hosts himself....we have to use
irc/ingame mod
