Subject: Some ideas for future versions...
Posted by w1ley on Thu, 22 Jan 2004 14:51:58 GMT

Alkalineanyway back to the topic:
this would be a cool addition to the ranking: Use the database from renstat to display the rank! this way you don't have to dump that info in the sqlite database and the rank will be the same as it is on most people's website.

-How about a tank theif option:
!tt XXX ; XXX has been added to the tank theif list

-Wolspy support or something similiar for win32.
This would be the best addition if it happened. Hey, if you run linux, does brenbot show how many players are playing on gsa/ase?

no lie, lets get back on topic.

Alki, i disagree about renstat. I like your concept, and I LOVE the concept of renstat. But renstat suffers from the following:
1) qualifiers are not documented fully
2) no forum support (they dont answer forum posts)
3) cant use ladder points as a guage. which is to bad, score is terrible as is average score. Ladder is calculated to take into account many factors; did your team win? whats your k/d? whats your overall score? etc

so renstat is not a good idea until they address these (minor) issues. But using some external data for !rank is a great idea.
