First, copy all your skins, maps and other data you added to renegade yourself to a save location on your harddrive.

Then open up Regedit via Startmenu>Run> Regedit [enter]

Delete the entire Westwood Key found under "My

Computer\HKEY_LOCAL_MACHINE\SOFTWARE\Westwood"

Now delete the entire Renegade installation directory manually eg. C:\Westwood , Delete that directory hold down "Shift"

when you hit delete then its deleted instantly and not moved to the recycle bin.

Now you reinstall Renegade to any directory you want it in.

Download the last patch that was provided by westwood: Ren_1037_English Patch and install this. Re-run the Renegade Config,

copy the maps, skins and stuff you backed up back to the Renegade/data directory and run Renegade. Have fun
