Three questions related to Rengade music, I really have not got much of an idea when it comes to audio editing, and how can I learn without knowing what to look for?

- 1) Why is it that certain mp3s that you use for menu music loop, and others don't?
- 2) What is the best application for synthesizing music, or what other methods are there of digitally creating music files?
- 3) Are there any good sites to do with audio creation/manipulation you know of?
