I have a Nvidia Gforce 4 ti 4200 8X agp card. 2 days ago I played farcry, my card could handle it. but now I've downloaded the new g-force driver version 53.03. released on December 9, 2003. and I installed it. then I wanted to play farcry, and now it runs like shit! . somehow, this new driver made my card alot slower or something . the problem is, I have deleted my old driver, does someone know where I can find older nvidia gforce drivers? first I had version 48.** but I can't find it on internet .
