Blazerthere is allready !maplist and !rotation

!maplist doesnt work in-game as is more of an admin function to see how many maps the server has available. !rotation works both irc and ingame and shows you the current full map rotation, with brackets around the current map.

Ok, but would it be possible for you to add in a future update the possibility to add/disable and customize these commands:

!download/!downloads  
!website  
!slap <player>  
!rape <player>  
!lol : ,.|.. (o\_o) ..|.,  
!insult <player>  
!newbies Newbie Meter: low [-----|--] high

Like others modules are now set by using:

!set downloads <ftp.\*\*.com>

!set website <website>

!set insult <on>

<etc..

This way "flooding" the server is up to the Host of the game. BTW, the !help command.. thats one big flood when 3 or 4 people do it at the same time , can you convert this to a Page <user> [helptext] , that wud be nice

Its one huge lovely program btw ...
