he thats also a good strategie for field.mix vegita 246 , what you can also do (this goes for every level) is get an APC and a technician/hotwire, and get in the APC also take a shotgun guy with you to cover you, and drive to the obelisk/guard tower, and destroy it with 2 timed c4's and 1 remote C4 on the master control terminal, get your landmines and place them in front of the door so no one can disarm the C4's (if they get through you always have that shotgun guy covering you, and another remote C4, now if that is destroyed you can walk in easily via the tunnels, and destroy the rest of the base
