AlkalineWell, n00bstories sfps is on average 35, so it could be host sometimes. Usually when a lot of people start saying lag, then its the host.

You must be referring to n00bsvr01. I have 6 servers. n00bsvr01 is running on a 2.4 Celeron which is a piece of garbage, and I sent an inquiry today about the possibility of moving up to a Pentium.

n00bsvr02-06 run on a Dual Xeon box. Even with all the servers full, it doesn't even use half of the CPU, and therefore all the SFPS on those is near 60.

The 35 SFPS on n00bsvr01 is not a cause of lag. As I said, you won't notice SFPS lag until it gets below 15-20.
