Look at this:

Voice-over IP support - command and coordinate. Give orders, rally your troops or talk smack with the enemy.

Voice recognition - give orders to bots; no more typing when you should be fighting!

Completely redesigned menus, including a new server browser with right-click menus and many brand-new configurable features.

Improved AI: vehicle control, advanced dodging and wall-dodging, improved aim, better team coordination.

Deeper single player mode with comprehensive team management options, challenge matches, multiple endings and more.

Integrated map vote and match set-up for Internet play.

UnrealTV - a proxy broadcast system allowing a huge number of spectators to watch a match live over the Internet.

Pixomatic software renderer allowing incredible performance with no 3D card required. Play UT2004 on your laptop!

A re-designed HUD, improved weapon effects (bullet decals, incredible explosions), improved first person weapon rendering and innumerable improvements for mod authors, new announcer voices, rendering optimizations...the list goes on!

These are the features I took from official site. It brings everything we always wanted for Renegade. I'm downloading it now!
