Ah, I see. I didn't pay any attention to that part since I already knew the init string options for my modem.

Disconnect your modem, then remove the cable from the socket.
Go to 'FILE' | 'PROPERTIES' | 'CONFIGURE' button | ADVANCED tab |
and make sure "bring up terminal window before dialing" is checked.
Go to FILE and NEWCONNECTION enter a name like "sdgadfg" just anything. it doesnt matter becasue you wont be saving it.
Press OK
Enter some random numer. "1" will do.
Press DIAL (remeber you should have pulled out your plug so that it doesnt actualy try to dial out!)
The terminal window should come up.

Type in the AT+MS=? command and press enter. If you make mistakes delete wont work. You'll have to redial and type it in again.
Write down the sting it spews out and compare it to the ones Upset Chaps provide.

Hope that helps.
