---

I have gotten a new parasite on my computer. Ad aware can't find it neither can a virus scan. IT is even getting around my firewall. It seems to be installing a new app everytime I start up. Some of them refuse to be deleted and when I shut them down or quarantine them they get restarted every time I open IE. Nothing seems to work. I have check the MS webaite and they want me to buy a new proggie to kill this stuff.

Anyone get this? Or have a clue on how to deal with it?
