First, yes, those are PCI slots.

Second, I would recommend the Radeon 9600 Pro (AGP 8x, but it supports all AGP slots, I think), which I've found as low as \$146 (American). I use this card and it runs Renegade great, with 4x AA and 8x AF, as well as being an excellent overclocker--to 533 core/700 memory from 400 core/600 memory stock. Although, to be honest, if what you're really looking for is DirectX 9 usability, you're best off waiting a month or two until the next generation of graphics cards comes out, and buying the mid-range selection from that.
