Evosnipe^^ As long as you don't mind hotties in your base.

The Stealth Tank is designed for get this STEALTH. The best use is to SNEAK into the enemy base to plant a beacon. Their second best use is to SNEAK into the enemy base and use its rockets on a building when alot of enemy are not around. The other thing they are good for is running over people who are not paying too much attention. I have taken out many buildings with only my stank, you just have to use strategy because you lose your advantage when you fire or you are really close to enemy units.
