I have a pretty nice pc, not the fastest anymore but its still pretty fast, Pentium 4 2,2Ghz 512mb rdram pc800 GF 3 ti-800 64mb ddr and 7200rpm HD's and i have this problem too.

It ONLY happens on a few maps:

- Glacier
- Glacier_Flying
- GlacierTS
- ConquestWinter
- ConquestIslands

When i join these maps, everything is nice for like 10-15 minutes and then all of a sudden my fps drops to 10 or less. I think its a map-bug or something, i know more people who have the same problem.

Leaving and rejoining fixes the problem for a few minutes usually but then you start 'fps-lagging' again :S
