You want to pick a univercal card or have a univercal slot on your mother board.

BTW - There is no such thing as 'universal cards' or 'universal slots' in reference to the subject @ hand.

Current video card industry `standards` have dubbed AGP the desired interface for people who have graphical capability needs beyond Excel & Word. 8x AGP is mainly a marketing gimmic since the amount of data it is capable of transferring per/second would totally swamp the current GPU(Graphical Processing Unit?)capabilities.
