All right, I have this problem with my computer. Sometimes when I try and run games, (CoD, Freedom Fighters) they will lock up, and stop loading or load very slowly. With CoD, It gets to the Now loading CoD screen (outside the game), and it freezes for about 20 minutes. It doesn't do this on my dad's computer, which is also a Sony Vaio with 256 megs of RAM, and its processer is only 100 megahertz faster than mine. I've tried many things to get rid of this (Defragmentation, Compatibility, ect) but none work. This is a very annoying problem, and I would appreciate it if any of you helped me.
