PHPBB is what the majority of forums I visit use, and I find them all user friendly and easy to use.
I actually find Invison Power Board less user frienly than PHPBB seeing as all you have to do in
PHPBB is go to profile to edit your sigg, avatar, personal information ETC but in IPB you have to
go to My controls, then to either avatar, signature, or personal information SEPERATLY to edit all
three. I find IPB a big pain in the ass. Also there are many cool PHPBB hacks (add on's) you can
install to further customize the forums such as the disable signatures, or avatars thing, or the
ignore user button. Besides PHPBB is free but you have to pay for IPB.
