---

Remove any 'open' entries that you have made.

Create a new text file with a .REG extension, then paste the following code and save it.

```
[HKEY_CLASSES_ROOT\Folder\shell\open]
```

```
"BrowserFlags"=dword:00000010
```

```
"ExplorerFlags"=dword:00000012
```

```
[HKEY_CLASSES_ROOT\Folder\shell\open\command]
```

```
@=hex(2):25,00,53,00,79,00,73,00,74,00,65,00,6d,00,52,00,6f,00,6f,00,74,00,25,\  
00,5c,00,45,00,78,00,70,00,6c,00,6f,00,72,00,65,00,72,00,2e,00,65,00,78,00,\  
65,00,20,00,2f,00,69,00,64,00,6c,00,69,00,73,00,74,00,2c,00,25,00,49,00,2c,\  
00,25,00,4c,00,00,00
```

```
[HKEY_CLASSES_ROOT\Folder\shell\open\ddeexec]
```

```
@="[ViewFolder("%I", %I, %S)]"
```

```
"NoActivateHandler"=""
```

```
[HKEY_CLASSES_ROOT\Folder\shell\open\ddeexec\application]
```

```
@="Folders"
```

```
[HKEY_CLASSES_ROOT\Folder\shell\open\ddeexec\ifexec]
```

```
@="[]"
```

```
[HKEY_CLASSES_ROOT\Folder\shell\open\ddeexec\topic]
```

```
@="AppProperties"
```

Then just run the REG file and click 'yes' to the prompt.

This is pretty much a work-around way of doing the same thing as if you'd gone through the 'Folder Options>File Types' tab.
