OK, I just would like an update or something. I still can't connect to any of the RadiantX servers (Where #noobstories is hosted) and I would like to know if I am using a bad IP for the server or if the router is still down.

Currently I use this IP to connect to the RadiantX servers: 207.44.205.140  
with a port range of 6667-6669, 7000

I tried all the IPs you had in this topic and I still could not connect. Any new info for me? I hope I am not the only person who is having this problem...

peace out,

-Kingdud
