---

Here are a few I can think of off the top of my head.

1. Remove !vote on/off from tempmods
2. Fix the ability to crash the both with a host message
3. Fix the spacing in the !pi response. I.E.

to

4. Ability for the bot to reconnect when conn is lost
5. Add rank support
6. Add ability to disable spawnkill response
7. Cleanup the !help command response, there are duplicates and commands that don't exist listed.
8. Add !locate and !wolstats
9. Limit logsearch response to 20 or less matches to prevent bogging the server down
10. add mod/tempmod status to the !pi response.
11. Possibility to use something like a .txt file for the banlist for easier managment.
12. Add what team the player joined on to the message: Playername has joined the game fighting for team (GDI/Nod)

Thats all I can think of right now, keep up the great work guys.
