Subject: Curved Edges option in Renegade

I've always noticed the curved edges option in Renegade under performance, and it has always bothered me how it's shaded. From when I had a crappy system, it was shaded and I knew that that was because my system sucked, but now I bought a new one a half a year ago and to this day it is still shaded. See the picture below:

What do I do to get that selected? I've heard that a few have used something to make it avaliable.
