first i would like to say.. great work

i have a little question about mod support. i know that renguard support ren alert, reborn and sole survivor. but if i wanna make renguard support my tc what do i need axactly to change? do i just need to add: gamename = Ra2Vengeance and everything will work fine(check up for the cheats and compare files between client and server)?

thanks you and keep up the good work!! Renguard is simply awsome!
