I still think the MAD Tank's (and demo truck's) windows look wierd. They need some dirt, or maybe they're too blue.

There's also the issue of colors of vehicles. At the moment you have gray vehicles for both the Allies and Soviets, with the exception of vehicles like the Phase Transport and Ore Trucks (what!, blue and red?).

Now are these colors final, or are you going to give each side a certain color for all their vehicles [in the future].
