Yeah, I had that happen, I just reset RenGuard a few times and that fixed it. Also, my always.dbs file got corrupt, something with my firewall and Renegade + RenGuard made my computer freeze several times, I think I figured out a way around the problem. *turns firewall on allow all* There, all better, if there's another way around it, I'd be grateful to know

I'm using McAfee 7.1 Pro with McAfee Guardian, it only froze when the firewall was filtering all traffic and I went to enter a server.
