amid_tha_rubbleare we all aware that (no offense), reanguard is pretty miserable and doesn't seem to stop much?

The server owners i have been in contact with tell me that it won't detect bh, final, and other cheats. I have been testing it myself in collusion with other owners, and all it seems to do is kick people for not having it. I guess that's one way to end cheating - don't let anyone on the server.

I don't want to kick up a flame or anything, and i am aware that a lot of hard work has been put into this, but...it doesn't stop bh and has little effect on final renegade, so i don't think i'll be using it. Maybe next version, perhaps? I look forward to seeing the next release.

ya our main server is a ghost town... It's just getting rid of everyone because they don't have it. I had thought that you did not need the Client Side but I guess I was wrong.
