Hey

I just downloaded and intalled your renguard. When i try to load renegade i click on my renegade icon then it loads for a sec then just goes dead on wont load. So i click my icon again and it says "renguard already loaded. try shutting it down and starting again".

Now the problem i have is that how do i shut down a program i cant even see? There is no renguard icon or exe that i can see. So i end the game.exe from my processes. I try again and get the same error.

Some one help? I want to test this wicked program out.
