---

I have been trying to use the standalone client, but it doesn't seem to work it it just kicks everyone saying that they are not runinng renguard.

I have tested it myself (Aflter a clean installation) and others have logged on said they were using Renguard then got kicked.

For your records the Game IP was: 66.27.198.111

And it was running on 4/8/04,

Could one of the renguard team take a look and tell me whats wrong.

Would the fact that the game is running behind a Natting firewall have any effect?

Thanks,

Gib
