it APPEARS, but to go ahead into the future, you would have to go the speed of light. In Einstein's theory of relativity, it states that as you get closer and closer to the speed of light, you multiply in mass because of all the energy you're gaining. Once you get to the speed of light, your mass multiplies infinitely, therefore you are unable to go anyfaster.

I think what I said is right, I've been told that your mass doesn't multiply but i could swear that's what my teacher said.
