Hello I have already submitted this once but problem wasn't solved. Now there is no more feedback and still have problems so here we go

My problem happens when I attempt to load Renegade or to join a game in gamespy. What happens is the reanguard program loads but it stays as a white screen. When I do CTRL + ALT + Delete it says that the program is not responding. I have tried just leaving it and nothing happens. I have tried reinstalling it and it works once or twice then the problem reoccurs again. I have also tried the backwards compatibility wizard and it still has the error.

Please help

For the record I am running Windows XP and disabling or restarting doesn't do anything to help me

Thank you

Osiris [/b]
