Hey all I have a few questions that have been probleming me since late October when I got wireless internet. (Lynksys wireless router WRT54g)Before this, I just had your standard cable internet, no P2P (kazaa lite) problems whatsoever. Downloads would always go anywhere between 85kbs-200kbs. No matter how many sources there were. When I got wireless I now get downloads from 0.14 kbs-20.0kbs on avg. Usually the downloads just say need more sources. When I unplug all wireless and hook it up just to modem, the downloads go back to the 85kbs-200kbs range, even on the same downloads I was previously getting jack crap on!

I cannot do this everytime I want to download something, simply because my computer is upstairs and the other one is down cellar. Ive tried port forwarding (not even sure what ports to use, but the ports I specify make no difference) on my Lynksys WRt54g wireless router.

Ive talked to others, some have this problems, others dont. They all have everything set up exactly the same with the same firmware. Im completely confused.I do not have a Windows XP firewall running. I want my download speeds back! Anyone have any tips, or know of anyone that has fixed this? My friends with wireless are also receiving the same problems, but they have different routers ect.

Thanks for any help!
