Ok when I try to install renguard using renguard client and run the installer, I am asked where I want to install it and I choose C:/westwood/rengade/ but when I click ok it says you need to install renguard to your rengade directory and did not let me install it. after that I downloaded renguard from the renguard safe installer client. I unzipped the contents to C:/westwood/rengade and then read the read me. It said to change game.exe to game2.exe. I couldnt find game.exe so I changed rengade.exe to game2.exe. then it told me to change the _Game.exe to game.exe and I did. Now when I click game.exe renguard loads up then disappears and crashes can sumone tell me what I did wrong and how to fix it.
